WIDE-REACHING TECHNICAL
CAPACITY AND KNOW-HOW,
WITH CONSTANT
TECHNOLOGICAL UPDATING

PH facility boasts a top-notch technical capacity, continuously updated professional operators, full compliance with the regulations, constantly updated technological tools, and an ongoing commitment to the **sustainable development of environmental issues** relating to the waste management and national and international trade in secondary raw materials that we obtain from various recovery activities.

ENVIRONMENT

Division

THE DIVISION

This commitment and research have allowed **PH facility** to identify the **solutions that best meet the specific needs of each individual Customer**, transforming a generic interest into a project with integrated solutions, whose successful implementation is ensured by a **“chain” of qualified providers**, including technical and legal consultants, logistics operators, and the destination facility itself, thus allowing the Customer to enjoying all the fruits of **PH facility**'s professionalism for each individual need, without having to burden themselves with the system's management.

NATIONAL REGISTER OF ENVIRONMENTAL MANAGERS ENROLMENTS

- **Cat. 1** - Urban waste collection and transport
- **Cat. 2 bis** - Initial producers of hazardous and non-hazardous waste
- **Cat. 4** - Collection and transport of special non-hazardous waste
- **Cat. 5** - Collection and transport of special hazardous waste
- **Cat. 8** - Brokering and trading in special hazardous and non-hazardous waste , over 200.000 tons per year

ENVIRONMENT

Division

CUSTOMERS

The **Division** organises and manages all of its technical, operational, and commercial activities in close collaboration with **producers, waste treatment, recovery and disposal plants**, national and international analysis laboratories, research centres, and the very best **professionals** in the road, intermodal and maritime transport sectors.

The Division stands out for its **experience, problem-solving knowledge, and constant customer support**, which, in just a short period of time, have allowed it to operate and collaborate with some of the largest Italian and international industrial groups, such as ILVA, ANSALDO ENERGIA, and the LAFARGE/HOLCIM Group.

THE STYLE OF “RESPONSIBILITY”

At **PH facility**, “**responsibility**” is not just a word. **It’s a style.** A specific commitment to our customers, which drives us to analyse their needs every day, based on a few simple rules:

BE HELPFUL: understanding the Customer’s needs and proposing positive goals and suitable solutions.

BE AWARE: being aware and attentive of the choices we make, while operating in full compliance with the law.

BE COMPETENT: accepting our duties and taking full responsibility for our operational choices within the context of a complex regulatory framework, so that the Customer can rely on PH facility with complete confidence in its professionalism and transparency throughout each stage of the environmental project.

BE DETERMINED: never stopping in the face of difficulties, and always seeking out the best solution, with the aim of ensuring the continuous improvement of the service.

BE RELIABLE: Showing the Customer, through the daily work we do, that they can continue to place their trust in us, thus allowing their own staff to focus on their activities, leaving the technical and management aspects of a particularly difficult and delicate sector to us.

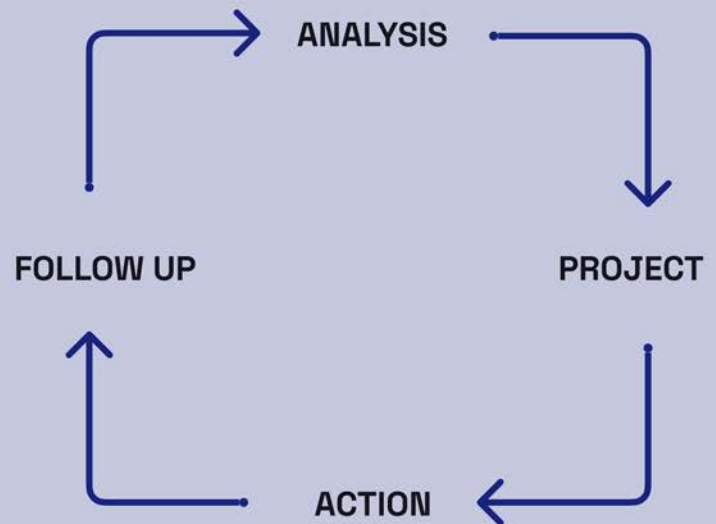

ENVIRONMENT

Division

METHOD

PH facility goes beyond the standard solution, with a strong **“service culture”** derived from industrial facility management that always places the Customer’s specific production and logistical needs, as well as the critical environmental issues for which it requires **effective solutions**, above all else.

This has led **PH facility** to go beyond the provision of typical environmental services, offering a more **complete and streamlined “governance”**. This method has kept us closely engaged in the field with the producer throughout all of its process phases, during which we analytically assess their needs, offering a fully customised project that will be measured based on the expected results, monitored in terms of continuous compliance with the regulations, and, last but not least, constantly optimised according to a **modern logic of technical and economic efficiency**, which is always shared with the Customer.

SUCCESS CASES

SUCCESS CASE

In the case of one Customer, their already complex operations has been complicated over the years by the decades-old problem of sludge and blast furnace dust, for which they were subjected to strict controls by the competent supervisory bodies.

PH facility intervened with an **innovative proposal**, which, unlike those typically found on the market, offered the Customer a new outlet: the total recovery of their steel mill waste.

ENVIRONMENT

Division

SUCCESS CASE

We created an **exclusive network** made up of a high-quality supply chain, starting with the analytical and characterisation of the material and its logistical transfer phases, and ending with its introduction into treatment plants that have been specially contracted for the purpose of conveying the treated material into the raw materials market.

PH facility substantially **redesigned the Customer's output possibilities** beyond the standard market processes, guaranteeing them considerable material handling flows, in a continuous process of improvement that has led them to entrust us with large and continuously increasing quantities of waste, both in Italy and abroad.
